EverClear™ Enclosures Care & Maintenance

Warning! Window cleaning sprays, RainX®, and alcohol-based solvents (such as acetone and lacquer thinner) should never be used on your EverClear™ Enclosure. Also exercise caution when using metal cleaners on pipework that is adjacent to EverClear™ acrylic panels.

Dedicate a wash mitt to your clean your enclosure with to reduce the chance of dirt & debris coming in contact with the acrylic panels. A mild boat wash is recommended.

We recommend polishing your acrylic panels monthly with 210® Plastic Cleaner/Polish, which removes static that attracts dust. It also has anti-fog as well as water-shedding properties.

To further protect your enclosure, we recommend waxing with Collinite® brand Insulator wax (#845). Only wax panels that have just been cleaned.

For minor scratches, we recommend Novus® #2 Fine Scratch Remover. Apply in circular motion and buff off.

For deeper scratches, you can also use Novus® #3 Heavy Scratch Remover. Complete with an application of Novus® #2.
